Mission Statement

Our mission is to prevent and cure cancer through research and transpose advanced knowledge for the better treatment and prevention. We are committed to provide effective care as well as warm hearted clinical care for the better of our patients and their families.

Scope of Work

We have been chosen to design a pediatric oncology center. This project will require 6 exam rooms, 18 infusion bays, a play area, healing gardens, as well as on stage - off stage design. The space should be designed to best promote a healing environment for the patients and their families as well as be an effective circulation for staff and patients with limited mobility.

User/Client Description

Edward Bennett Medical Oncology (Client) - They requested our design based heavily off of evidence-based design (EBD) with the utilization of on-stage, off-stage design to provide for the growing need for medical oncology. There's going to be a renovation that will result in a pediatric oncology unit that will provide healing and comfort for the patients as well as their families.

Patients (User) - This unit specializes in pediatrics, so the patients will be children and teens who have been diagnosed with cancer. They will use the space to receive exams, check-ups, and treatment. Different spaces throughout the unit will also help the patients relax and play while here, too.

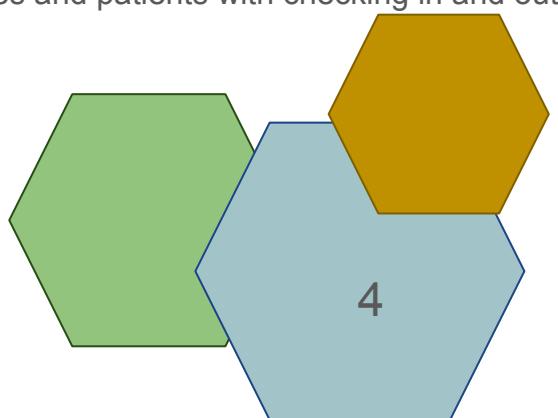

Families and Friends (user) - These are the ones who come to support the patient during treatment. These users may include parents, grandparents, siblings, spouses, or close friends. They will help to create a positive distraction for the patient they came with. They will also be able to relax in the lounge area or browse the resource center to further their knowledge on the patient's diagnosis.

Nurses (user) - The nurses will have the main priority to help with the patient treatment and healing. They will be with the patient when the chemotherapy is distributed as well as during preparation and to check up on the patients. They may also help provide comfort to the patients and their friends and family. When the nurses aren't assisting with treatment, they'll be using the nursing station and other areas provided to complete officework.

Physicians (user) - They will work privately with the patients to provide the best care possible. When they're not working with the patients, they will utilize the off-stage areas provided to complete administrative work.

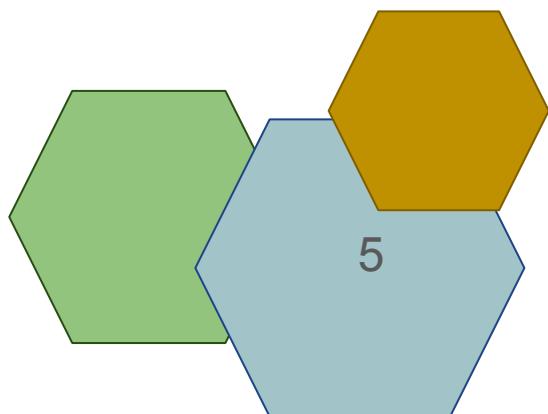

Financial Counselor (user) - The financial counselor is there to answer any financial questions or concerns a patient or their friends and family may have while receiving treatment.

Receptionists (user) - The receptionists are there to help families and patients with checking in and out of the unit for their visits.

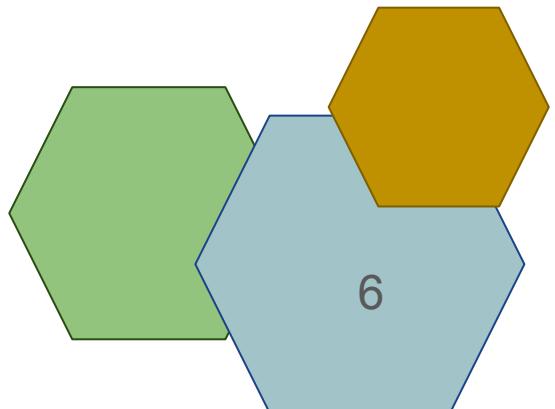

Goals & Objectives

- Create a clean environment for the patients and their families.
 - Install a hand-washing sink near the door of each patient room. (URMAHL, 2016)
 - Have hand sanitizer dispensers by every doorway. (URMAHL, 2016)
 - Use finishes with natural antimicrobial properties. (Lee, 2012)
 - Avoid the use of curtains and carpets because they tend to become contaminated with bacteria. (Steinberg, 2013)
- Create private areas that can be utilized in a variety of ways.
 - Provide comfortable level of acoustic. (CISCA 2010, p.5)
 - Use a 3M privacy screen on computers (CISCA 2010, p.8)
 - Provide a separate room for families to meet with their caregivers. (Vickery et al, 2015)
- Create relaxing spaces that promote healing.
 - Create a sense of control in the space through giving the patient control to things such as lighting, temperature. Etc. (Andrade & Devlin, 2014)
 - Make nature present in the space through the use of plants, shapes, lights, and sounds. (Nousiainen, Lindroos, Heino, Valtra, & Hakkinen, 2016)
 - Use wayfinding landmarks that have to do with nature to help reduce visitor stress. (Smith, 2007)
- Implement positive distractions for the pediatric patients and their families.
 - Put in an interactive playroom to help with stress reduction and anxiety. (Schultz, P. & Hild, L., 2016)
 - Incorporate varied lighting, colors and shapes, natural light, and garden access. (Schultz, P. & Hild, L., 2016)
 - Implement things such as artwork, gaming systems, televisions, etc. that children can use during their time in the hospital. (Schultz, P. & Hild, L., 2016)

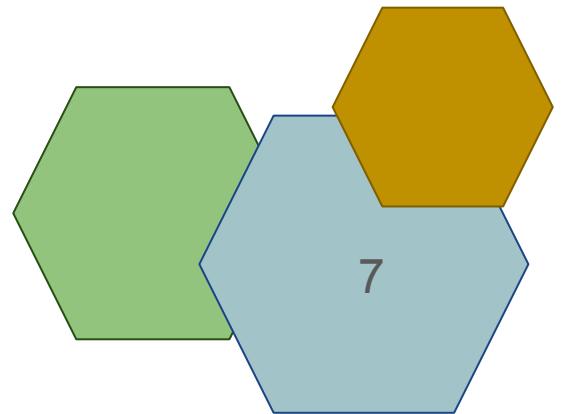

Design Concept Statement

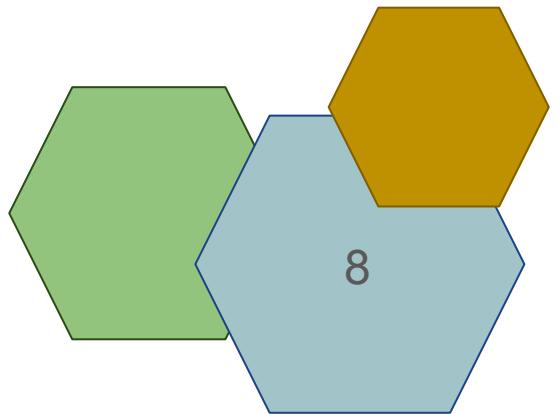

The Edward Bennett Medical Oncology Center diagnoses, treats, and cares for its cancer patients throughout the course of the patient's illness. This unit is patient and family friendly through high levels of care, high quality of care, professional staff, and collaborative members. The design of the unit will reduce patient and family stress and anxiety as well as provide positive distraction to take the patient's focus off of any pain or fear associated with a healthcare setting. This is accomplished through bright and engaging colors, textures, materials and natural light. The infusion bays and exam rooms provide plenty of space for staff, patients and their families. Colored ceiling soffits will help to guide families through the space and make wayfinding an easier route for the patients and their families. The overall focus of the unit will be a fun, bright, engaging space which promotes and encourages healthy healing.
